

You understand that the spike protein is a gain of function bioweapon. Thread by @GhostOfNakadai on Thread Reader App – Thread Reader App

19-24 minutes

"The biological weapons convention treaty states that any adjustment or modification of a biological agent like this virus that doesn't provide a benefit for mankind, is a biological weapon."

"These particular changes in this virus, including the PRRA inserts, which are amino acid that were inserted that are very critical for the furin cleavage site for this virus to infect, the insertion sites that were made with HIV and simian or ape-like HIV equivalent viruses."

"The prion-like domain at the top of the spike protein as well as the HIV Glycoprotein 120 insert that's critical for the attachment of this virus to cells, all of which are not naturally occurring."

"We've looked at all the different coronaviruses that exist on the planet. None of them have PRRA insert, none of them have this tremendous amount of HIV inserts, none of them have a regional binding domain that is a prion-like binding domain, which means it attaches to cells."

"And prions are things that are abnormal proteins that cause other proteins to become abnormally folded."

"To be clear, genetic changes were made to the spike protein in a lab to create what is known as Covid-19 / Sars-Cov-2. That's what the data shows."

"Research done in 2010 by Shi Zhengli, who's often called the bat lady, her goal of that research was to increase for the ability of the virus to infect human cells. Naturally occurring spike protein from horseshoe bats were unable to bind to human ACE2 receptors."

"It sounds like you discovered at least two man made inserts into the Sars-Cov-2 spike protein genetic code, that proved it was produced in a lab?"

"Right, the research papers Shi Zhengli, Baric, and others published, they were very clear and somewhat proud of the fact that they've been able to modify the virus and insert changes to it that made it more effective and potentially more dangerous."

"This genetic code for the furin cleavage insert in the PRRA, is that found in any other coronaviruses in nature?"

None. There is absolutely no other coronaviruses that has this PRRA insert."

"Since mutations occur one nucleotide base at a time, you will have to come up with a phenomenal explanation as to why 12 nucleotide bases suddenly inserted themselves into a virus that none of the other viruses in that category have."

"Are you saying sections of the genetic code of HIV were inserted into SARS-COV-2 virus?"

Zhi Zhengli published this early on, many years ago, where she was very proud that she did this. She used a HIV pseudovirus to do it, and we also know that HIV glycoprotein 120 is a prion."

"So this is the HIV that became famous in the 80s and 90s. It's THAT HIV!?"

"Right."

"And somebody took pieces of a genetic code of HIV and put it into Sars-Cov-2?"

"That's what Shi Zhengli admitted to in publications that she had yes. It was to increase infectivity to make it more effective."

"But it is even clearer that what she was going for was the development of a PRION DISEASE, because where everybody is coming up to speed with a virus and how challenging it can be to deal with it, what's even more challenging to deal with are prions."

"Because prion diseases are relatively new in our understanding for treatment, and they cause permanent damage unless they can be reversed."

"So the development of a prion putting HIV glycoprotein 120 in there attaching to the sialic acid receptor, there is nothing about that, that is advantageous for people, and the ability to use prion diseases is quite a weapon."

"How lethal are prion diseases?"

"People die from prion diseases."

"This process of inserting amino acids to increase infectivity, is that Gain-of-Function?"

"Right, so Gain-Of-Function is anything you do that changes a naturally occurring biological agent like this virus."

"The premise of GoF really has a good premise behind it. The original idea is that if you could step ahead of an infectious agent, you could do a good job at providing treatments for people, and knowing when and where it's going to spread."

"This isn't a step ahead. This isn't a single nucleotide base. This is a spike protein that has an HIV glycoprotein-120 insert into it. This is a spike protein that has four amino

acids to make a furin cleavage site, the PRRA insert."

"This is a spike protein that has multiple HIV and SIH inserts. This is not something that evolutionary evolved. The evolution of something with this many changes would take hundreds or thousands of years, it's not staying a step ahead of it."

"And making this provided no advantage to human beings so it makes it a biological weapons treaty violation.

This is, it's a plain gun."

"The primary ones behind this that we know of is Peter Daszak, Ecohealth, Ralph Baric, University of Carolina, Shi Zhengli, Wuhan Institute of Virology. But we know there's been other individuals involved, we know that other universities were involved including here in Texas..."

"I began querying federal funding sources of Ecohealth and GoF research. That allowed me to run down the actual grant numbers. What we have is the actual grant numbers, how much moneys there were, wether it came from the Department Of Defence, which payed for half of this.."

(What are DoD doing in Ukraine? Warrants thorough investigation...)
